Highlights

- Light sharing lets trackers carry 2–3× more modules at a 90% yield floor.
- A neural controller adds 0.007 LER over a tuned window, nil at equal retention.
- Mean-response designs leave 71% of pairs at the floor; an oracle reaches 87%.
- Conformal margins hold inside the ensemble; no rule is safe outside it.
- Plants beat agrivoltaics above 48 USD/MWh (64 at equal capex per watt).
